

NATURAL STONE MAINTENANCE

Natural stone, somewhat porous and can stain. Prior to installation the product is sealed with an Impregnator Sealer to protect the surface and deter stains. Once the sealer has been applied, small amounts of spilled liquid will bead up and can easily be wiped off with a damp cloth. Do use reasonable care and immediately blot up excessive spills such as red wine to minimize permanent discoloration. Resealing is required.

Maintenance of natural stone is easily achieved with warm water and a small amount of liquid dish soap to clean up most spills. Rinsing with clear water and wiping with a dry cloth is very important to remove any soap residue which can leave a light haze if allowed to build up. We recommend using a PH Neutral cleaner. Do not use vinegar, bleach, ammonia, abrasive powder, or cream cleaners not specifically formulated for natural stone as they may etch away and/or coat the natural polish. Proper care and maintenance will prolong the natural stone for many years to come

RECOMMENDED CLEANER:

Zep Neutral Floor Cleaner Concentrate cleans and restores the shine to hard surface floors. It uses a neutral pH, low foam and easy-to-rinse formula that works quickly. It works on natural stone, granite, vinyl and marble floors in commercial and residential spaces.

NEUTRAL PH FORMULA

- Cleans & restores shine, no rinsing needed
- Maintains polish without stripping protective coating
- Suitable for vinyl (vct), marble, granite & stone floors

Instructions For Mop and Pail. Dilution: Normal: 1oz. per gallon of water; Light cleaning: 2oz. per gallon of water; Heavy cleaning: 3-5oz per gallon of water.

This can be purchased at: Home Depot, Lowes, Amazon
